Project name: *IIUC Student data of newly admitted students.*

User guide

Before Run:

1. Make 4 text file named 'fulldata','start','group','passw'.Make sure first 2 file is empty & 'passw' contains a desired password(integer),and start contains the number '1' at the beginning.

We are ready to run.

After run:

1.The software takes 4 types of data as input.

   .Name

   .Roll

   .SSC GPA

   .HSC GPA

Don't keep any field empty while entering data.

2.Give atleast 3 digits of roll where the 2nd digit must be '1' or '2'.(As it separates data in male or female by this)

3. Follow the given example in each operation (If given).

4.The software is sensitive for uppercase and lower case letters.Make sure you're entering data according to the example & make sure you're giving the exact same name in order to perform the expected search on search option.
